WARLOCK DARK ARMY

Welcome to ATM Hacking

Find old ATM's with shutter doors.

If you need an example, just google **old ATM with shutter doors**.

Insert your card, type in pin. withdraw the amount (\$60-\$300 – don't do anything over 300, withdraw what's in your account).

Pay attention and be quick right after you hit withdraw is when you are doing the jam.

While ATM is dispensing the cash, you will need to hold both shutter doors to prevent it from opening. Hold it until an error message pops up. This will send a shutter error to the ATM switch..

Here's the JAM - after you let go of shutter the money will still come out since it was halted.

After the message pops up for at least 5 seconds, take your hands off. The ATM switch will automatically reverse the transaction. The amount requested will be reversed and credited to your account.

Now you have a free \$300 or whatever amount you choose.

Summary:

Find old ATM the older the better. Only withdraw what you have in account. For example, if you have \$150, only do \$150. When the jam is completed, you'll have \$150 in cash and \$150 still on the card. Don't go over \$300 do this every 12 hours at different ATM's.
